

MARKOUT — current hybrid architecture

Real v4 swap → 5-minute markout → Pyth verification → Reactive or Circle delivery → fee allocation

GREEN Reactive event-to-action rail BLUE independent Circle rail

CONTROLLED RESEARCH STUDY

markout-phase-6-v1 · deterministic synthetic data · boundary: not a historical backtest or exact LVR estimate

768 trades · \$1.999M / policy · 6 regimes
Fixed vs volatility vs MARKOUT · 21-point base-fee sweep

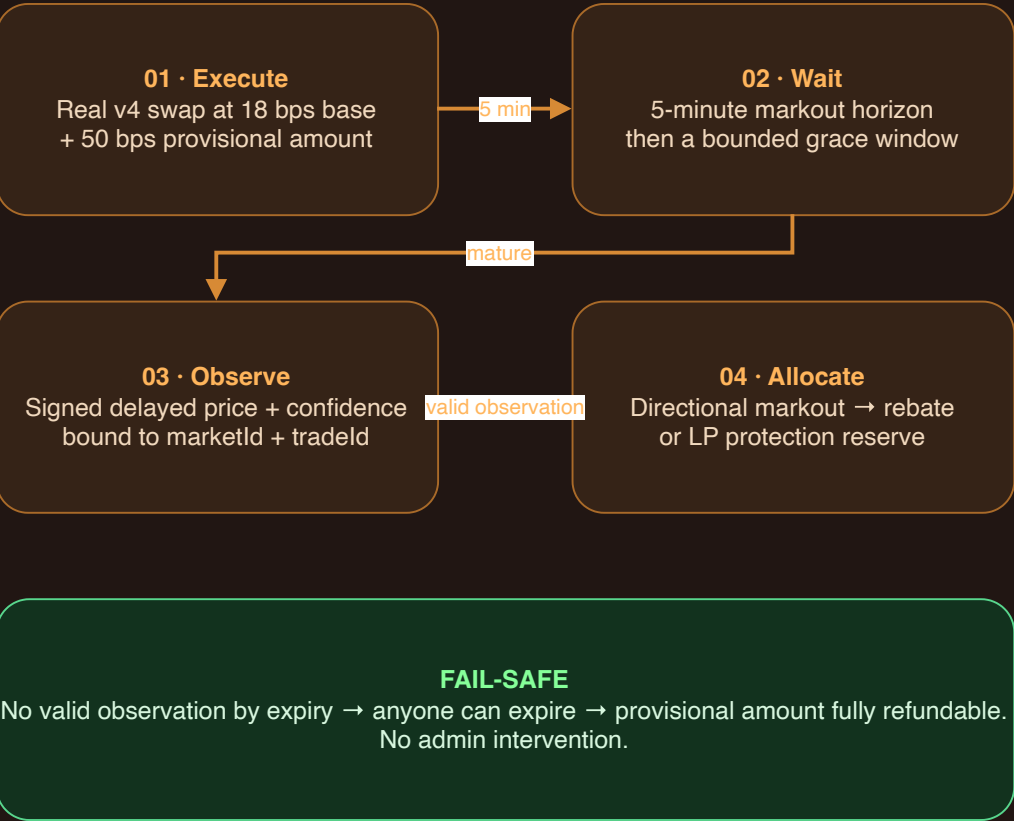

8.58% lower benign-flow fee
27.4262 bps vs fixed 30 bps

40% lower improving-flow fee
18 bps vs fixed 30 bps

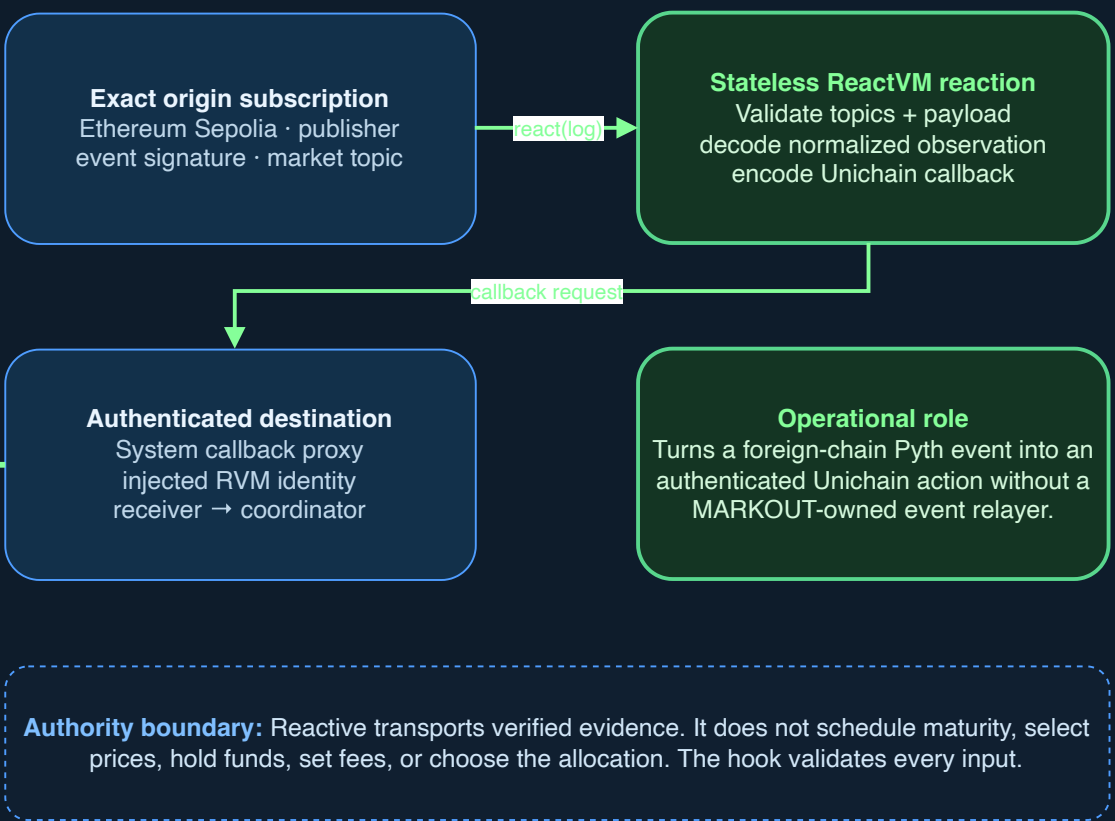

+21.87% LP net-after-proxy
vs fixed-fee policy in this study

MARKOUT — deployed mechanism, delivery rails, and evidence

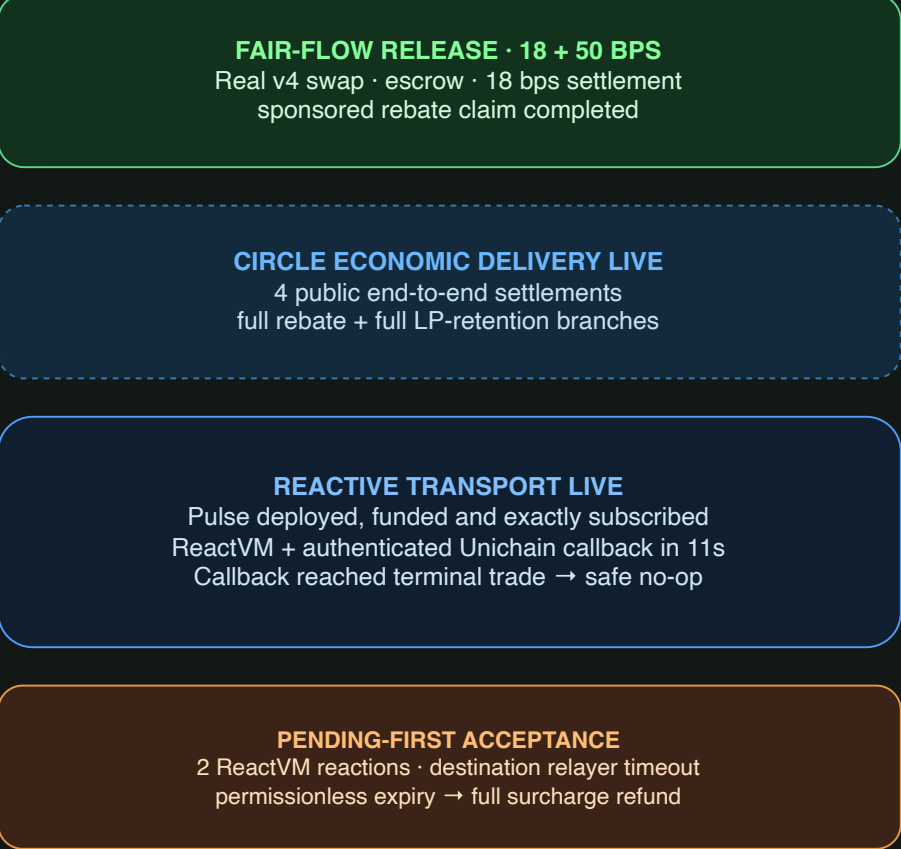

COMPLETE FEE MECHANISM

REACTIVE NETWORK — LEGACY EVENT-TO-ACTION RAIL

WHAT IS PROVEN TODAY

RESEARCH DESIGN + REPRODUCIBLE RESULT

Controlled synthetic evaluation — claims apply only to this fixed dataset and proxy definition
